

1. About Zentora Labs

Zentora Labs is a software company founded in 2016 in Lisbon, Portugal by Marta Esteves and Rui Coelho. The company builds analytics software for logistics teams.

Zentora currently has 214 employees across three offices: Lisbon (headquarters), Toronto, and Nairobi. The Lisbon office has 120 employees, Toronto has 64, and Nairobi has 30.

Our flagship product is Orbit Analytics, a dashboard platform that tracks shipments, delays, and delivery costs in real time. More than 1,800 customers in 40 countries use Orbit Analytics.

Zentora's mission is to make supply chains understandable for people who are not data scientists. The company values are Clarity, Ownership, and Kindness.

2. Leave Policy

Every full-time employee receives 28 days of paid annual leave per calendar year. Unused leave can be carried over, up to a maximum of 5 days, until March 31 of the next year.

Sick leave is separate from annual leave. Employees receive 12 paid sick days per year. A doctor's note is required only when the absence is longer than 3 consecutive days.

Parental leave is 20 weeks for the primary caregiver and 8 weeks for the secondary caregiver. Both are fully paid. Leave can be taken at any time in the first 12 months after the birth or adoption.

All leave requests must be submitted in the PeopleHub portal at least 10 working days in advance, except for sick leave, which should be reported to the manager by 10:00 on the first day of absence.

3. Remote Work and Equipment

Zentora follows a hybrid model. Employees work from the office on Tuesday, Wednesday, and Thursday. Monday and Friday are remote days by default.

Remote workers receive a monthly stipend of \$60 to cover internet and electricity. In addition, each employee receives a one-time home office budget of \$450 for a desk, chair, or monitor.

Laptops are replaced every 36 months. Engineers can choose between a MacBook Pro 14 and a Lenovo ThinkPad X1. All other staff receive a MacBook Air by default.

Employees may work fully remotely from another country for up to 20 days per year, but they must first get approval from the Head of People, currently Ines Barros.

4. Travel and Expenses

Flights shorter than 6 hours must be booked in economy class. Flights of 6 hours or longer may be booked in premium economy. Business class is not permitted.

The hotel limit is \$180 per night. The daily meal allowance is \$55 when travelling. Taxis are allowed only when public transport is not available.

To get money back for any work expense, submit form EXP-7 within 30 days of the purchase and attach the receipt. Approved claims are reimbursed within 10 business days to the employee's bank account.

Expenses above \$500 need written approval from a Director before the purchase. Claims submitted after the 30-day deadline are rejected without exception.

5. Orbit Analytics Pricing and Limits

Orbit Analytics is sold in three plans. All paid plans include a 14-day free trial, and no credit card is needed to start the trial.

Plan	Price per user / month	Data retention	Support
Starter	\$29	90 days	Email only
Pro	\$79	400 days	Email and chat
Enterprise	Custom quote	Unlimited	24/7 phone

Customers can request a full refund within 30 days of their first payment. After 30 days, subscriptions are not refunded but can be cancelled at any time.

The Orbit API allows 600 requests per minute on the Pro plan. Requests above the limit return HTTP status 429. The service level agreement guarantees 99.95% monthly uptime.

Error code ERR-4031 means that the API token has expired. Create a new token in Settings, then API Keys. Error code ERR-5120 means that the data export is too large and must be split by date range.

6. Security and Incident Response

Passwords must be at least 14 characters long. Multi-factor authentication (MFA) is mandatory for all company accounts. Passwords are rotated every 180 days.

Any suspected security incident must be reported within 1 hour to security@zentora.example. Do not try to fix the problem yourself before reporting it.

Incidents are classified as SEV1 (customer data at risk), SEV2 (service degraded), or SEV3 (minor issue). The on-call team responds to a SEV1 within 15 minutes, to a SEV2 within 2 hours, and to a SEV3 within 2 working days.

Example: calling the Orbit API with a token.

```
curl -H "Authorization: Bearer $ORBIT_TOKEN" \  
      "https://api.orbit.example/v2/shipments?status=delayed"
```
